SOBEYS: COMPLEXITY MADE CLEAR

The Sobeys project demonstrates my abilities at turning a messy, manual, error-prone workflow into a clean, guided, self-serve experience. It showcases how I can simplify complex processes for both guests and staff, with structure, onboarding, and clarity.

It also proves my strength in evidence-based discovery, uncovering real friction and delivering measurable results. Across a total 18-month, two-year, I know how to take a scattered, high-stakes workflow and turn it into something stable, scalable, and easy to use.

Discovery → Define → Design → Validate → Deliver

CASE STUDY STORY

Sobeys eGift Cards

Digital Gift Card Fulfillment for Corporate Clients

Digitizing a manual process for fast, contactless online ordering

PRODUCT OVERVIEW

Modernizing B2B Gift Card Ordering for Sobeys

Sobeys relies on Vendeavor, Inspire, and Send Outs to process bulk gift card orders for corporate clients. These tools are outdated, slow, and require manual data entry, creating friction for both internal teams and customers. I led the redesign of the ordering experience, focusing on clarity, speed, and scalability. The goal was to create a modern, self-serve solution that reduces support tickets and improves the overall experience.

The new platform delivers a streamlined, guided ordering flow that supports both corporate and retail customers. It includes clear pricing, personalization options, and a dashboard for managing orders. The result is a faster, more intuitive system that reduces errors and gives Sobeys more control over its digital gift card program.

PROBLEM STATEMENT

Understanding the Challenge

How do we digitize the entire corporate bulk gift card process, so it's as easy to use as the retail flow on Sobeys.com?

- User Pain Points
- How We Solves This

USER RESEARCH

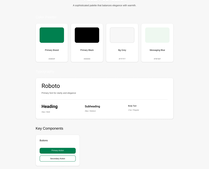
Ordering Made Simple

A clear, guided flow that reduces errors and builds confidence.

USER RESEARCH

Understanding Our Audience

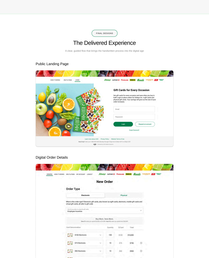
Crafting experiences for real users and design personas.



DESIGN PROCESS

Shaping the User Experience Flow

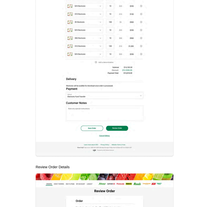
Whiteboard workshops validated the form flow and required details.



DESIGN SYSTEM

Visual Foundation

A scalable design system that enhances speed and consistency.



FINAL DESIGNS

The Delivered Experience

A clear, guided flow that reduces errors and builds confidence.

SOBEYS INSIGHTS

While the initiative was a solid step forward—enabling Sobeys to offer digital gift cards for the first time—we didn't achieve the target adoption rate of 40–45% relative to physical cards. Through post-launch analysis, it became clear that the ordering form introduced too much friction for an online experience. The insight was straightforward: the experience needed to be faster, more intuitive, and better aligned with how users actually shop online. Subsequent iterations, shifting toward clearer pathways, a more guided flow, and a more intuitive, step-by-step flow.

Mapping the Problems	At Sobeys, the pain points were crystal clear—its user journey, no profiles, no visibility, no validation, no guardrails, and extremely long processing times. We fixed those by introducing guardrail flow, structured validation, onboarding, profiles, and clarity.
Proven Impact	Even importantly, the Sobeys project demonstrates my strength in evidence-based discovery. Across a total 18-month, two-year, I know how to take a scattered, high-stakes workflow and turn it into something stable, scalable, and easy to use. I'm also very successful in cross-team work—from research to change — directly supporting the approach where clarity, onboarding, and reducing cognitive load are the core drivers.
Personal Takeaways	I've also reinforced my ability to bring structure to ambiguity, align stakeholders, and turn messy workflows into clear, guided experiences. This project showed me how much I love the "before" and "after" moments—when you can see how much easier—and more valuable—insights tool and guide users properly, adoption follows.
